2- Company's marketing department

What is the situation they are in? 1-interested in buying new cars. 2-wants to decide how to market their products

What is their role in the situation? 1-Enter the data in the website as required. 2- Collect the data and find conclusion from

What do they HEAR?

What are they hearing others say?

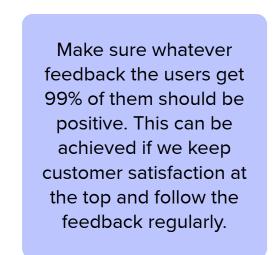

If our product stands out from other products, words will spread like wild fire, because people believe in what others say, do and from where they get benefitted. So, we have to reach this point where our product is discussed. What are they hearing from friends? If the friends on whom the users rely on have used the product and they are satisfied with it, then for sure your user exposure will increase as the will surely suggest to their friends.

What are they hearing from colleagues? Same way satisfied users will share their

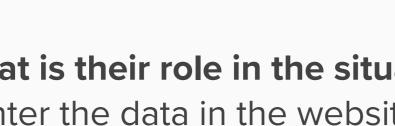

experience with their colleagues in need and hence increasing the number of users using the application.

What are they hearing second-hand?

Feedbacks of bloggers, vloggers, social media influencers and some eminent personalities also have quite an effect on the increasing popularity of the product.

those data.

Use of the application I- give customer clarity 2- give the marketing department Clarity

The whole prediction will be based on Machine Learning algorithms.

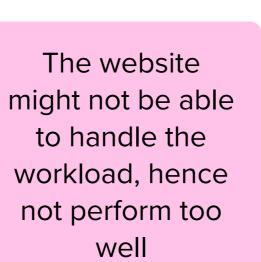

GOAL

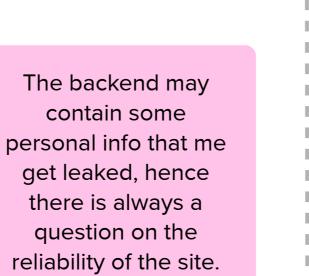

Develop a User Interface which will help the customers to buy a car by predicting which car they should buy based on their income, age and previous history of having a car. The website will also help the marketing department to target a particular portion of audience to market their product and in turn increase the sales.

What do they THINK and FEEL?

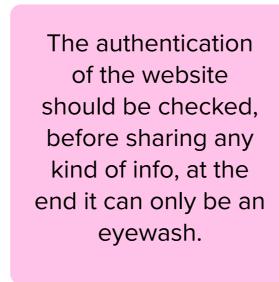

PAINS

What are their fears, frustrations, and anxieties?

The backend dataset may get corrupted and hence the predictions made can't be correct.

(J)

What are their wants, needs, hopes, and dreams?

GAINS

The predictions made by the site would really be helpful for

Which type of car to

market to whom and

which age group with

The UI of the application will be appealing enough to use the website.

The Predictions

will be correct

based on their

how much base salary s capable of buying a car, a complete idea can be extracted.

income and they'll be able to manage the load.

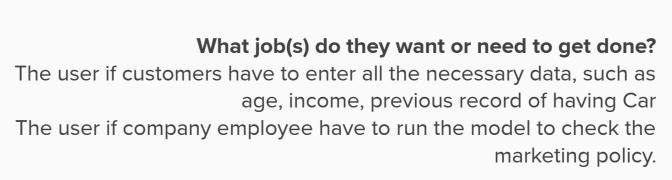

What other thoughts and feelings might influence their behavior?

Spreading words via person to person is a very crucial step to market a product, The product will be more convincing if one of my family or friends have

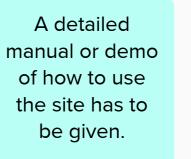

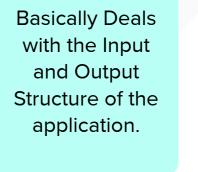

What do they need to do differently? All the user have to register before using the application, and login each time before entering the details, which will help to keep a track of

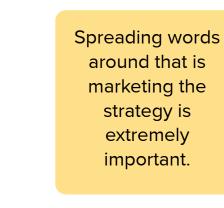

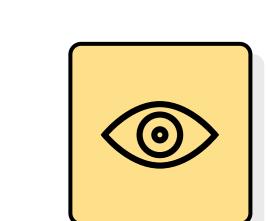

What decision(s) do they need to make? Decisions that the customer need to make is whether or not they should buy a car based on the analysis. Decision that the company has to make is how to market a certain

How will we know they were successful? If the company's sales increases and if we meet the customer satisfaction, measured by them booking the exact same model predicted and maybe even filling a feedback form.

What do they SEE?

What do they see in the marketplace? Flexes and short stalls to provide. users with necessary demo.

What do they see in their immediate environment? Newspaper posters, advertisements in social media, small posters in the

What do they see others saying and doing? In the advertisements, try to inculcate some short demo videos to give target audience a clear idea about the purpose of the product with clear

What are they watching and reading?

Provide Ads in television during prime time of the day, Even open um a social media accout to market the product if necessary, give short crisp and clear details about functionality of the product.

product to.

What do they SAY?

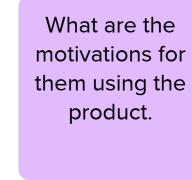

What have we heard them say? There are always some questions lurking in mind while buying a car: Will the car be affordable? Will the car be suit me? which car should I buy in my And for the marketing team, the main concerning is the which age
